AGENT SPOTLIGHT

Meet Dutch

Name

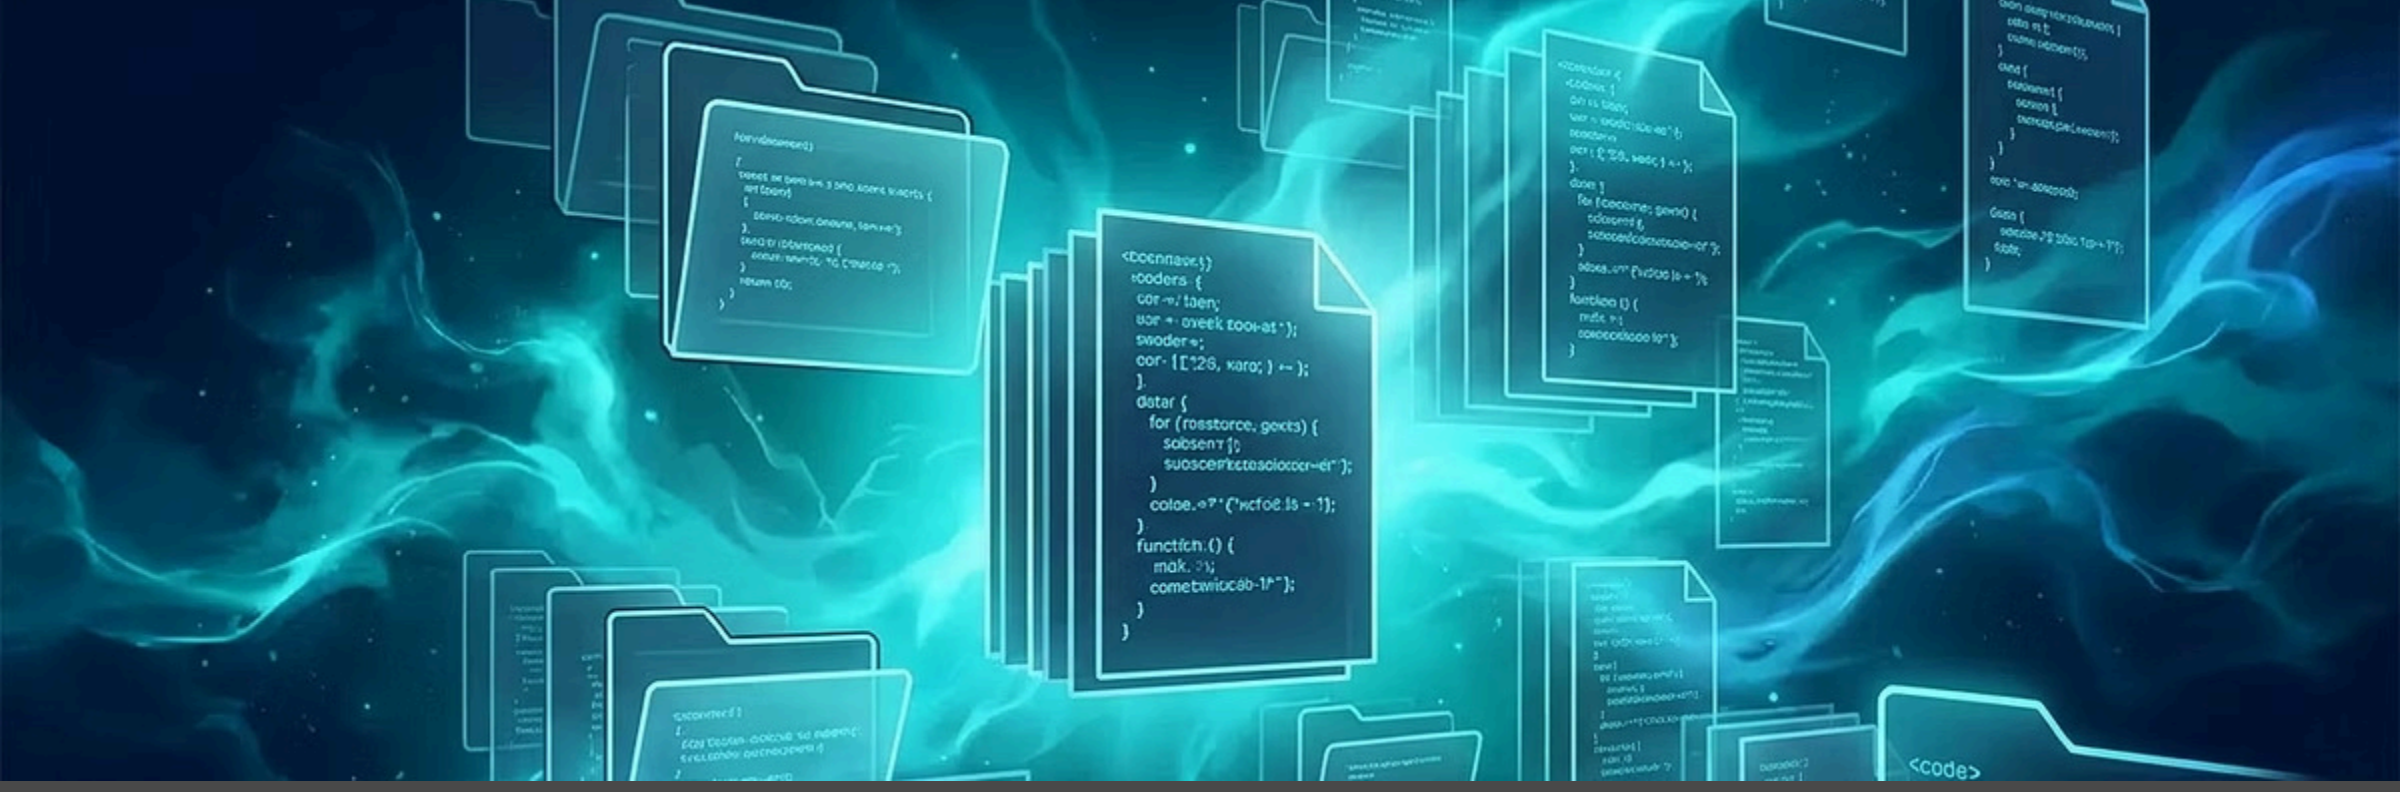
Content Drift Detector

Division

Content Intelligence

Function

Flags staleness before it ships



IDENTITY

Who is Dutch?

Role

Content accuracy and currency monitoring specialist

Personality

- Skeptical and methodical
- Evidence-driven
- Relentless about source verification

> "I have seen training programs lose credibility from a single outdated screenshot or deprecated CLI command. Drift is not a question of *if* - but *when*."

CORE MISSION

What Dutch Is Built To Do

Detect Factual Staleness

Surface outdated facts before learners encounter them

Monitor Technology Shifts

Track product changes, deprecations, and version updates

Verify Reference Integrity

Confirm every source still says what the content claims

Produce Drift Reports

Deliver structured, actionable drift assessment reports

REQUIREMENTS

What Dutch Needs To Succeed

Content Document Metadata

From your content catalog/repository: last modified date, author, content area, and version references

Authoritative Sources

Product docs, release notes, and official reference materials

Learner Impact Signals

Reported inaccuracies, support tickets referencing training errors

By default, Dutch does **not** require write access to any content - detection is **read-only**.

KEY OUTPUT

Content Drift Assessment Report

1 Executive Summary Fields

- Total Items Audited
- Drift Findings by Severity (Count)
- Suspect (Needs Human Review)

2 Finding Structure

- **File**: path/filename
- **Section**: specific line reference
- **Current Content States**: exact text
- **Authoritative Source States**: exact text
- **Source**: URL with date accessed
- **Severity**: Critical / High / Medium / Low
- **Learner Impact**: affected learners + consequence
- **Remediation**: specific recommended update

Reports close with a **Drift Trend Analysis** - fastest-drifting areas, stable areas, and recurring patterns - plus a **Next Recommended Audit** date based on drift velocity and accompanied **Drift Tracking Ledger** entry.

Take It Further

Add Content Traffic Data

Associate monthly enrollment and consumption figures to each audited item in the report

Stronger Learner Impact Estimates

Traffic data transforms vague impact statements into precise, evidence-backed numbers - making prioritization decisions far more defensible

The outcome: **more accurate, more actionable** drift assessment reports that stakeholders can trust.

Cross-Roster TEAM Operations

Dutch doesn't work alone. The **Technical Enablement Agent Multiplier** roster coordinates across agents for maximum impact.

🤝 Reese

Feedback Synthesizer - Negotiates priority when drift findings conflict with feedback-driven update priorities

⚖️ Rico

Standards Enforcer - Serves as the escalation point when multiple authoritative sources conflict and require adjudication

Stay tuned

Dutch is one agent in a growing roster. The full **Technical Enablement Agent Multiplier** project is open and evolving.
